Large Waste Transport Container

Addressing complex challenges
It's in our heritage.

THE LARGE WASTE TRANSPORT CONTAINER (LWTC) IS A HIGH CAPACITY, VERSATILE AND SHIELDED PACKAGE DESIGNED TO MEET IAEA REGULATIONS FOR A TYPE B(U)F CONTAINER.

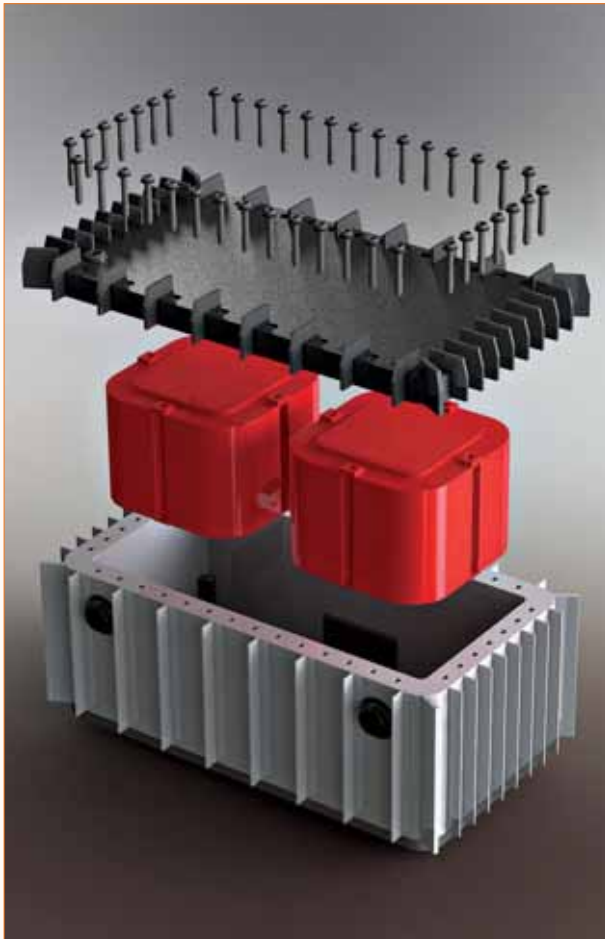

With increasing scrutiny on optimising materials transport, the LWTC is capable of transporting up to 34te of intermediate level waste.

It has the space and flexibility to carry any type of material in boxes, small or large drums or stillages and also has numerous internal furniture options that can be configured to deliver whatever task the LWTC is required to undertake.

And it's designed to meet the most stringent UK rail network gauge profiles.

The Large Waste Transport Container is the best option for a go-anywhere-do-anything package.

- We design complete end-to-end transport solutions, including engineering bespoke transport packages to meet your needs
- We bring to you the benefits of our expert ongoing contribution to IAEA regulations to ensure your transport is efficient and compliant
- Working with INS gives you access to 40 years of transport experience coupled with the latest operational insight
